

COMPATIBILITY

Compatible with all crop and pasture systems.
Compatible with soil conditioners.
Compatible with synthetic fertilisers.
Compatible and compliant variants for organic farming systems.

IMPROVE SOILS AND NUTRIENT CYCLING

To improve soils, and nutrient cycling consider BioAg's range of liquid products.
Ask your BioAg representative, or visit www.bioag.com.au for more information.

“Works now,
and keeps
working”

BIOAG FERTILISERS

FOR IMMEDIATE AND
CONTINUOUS
LONG TERM NUTRIENT SUPPLY
TO CROPS AND PASTURES

www.bioag.com.au
Australian owned and operated
Since 1999

YEAR ROUND NUTRIENT AVAILABILITY TO CROPS AND PASTURES

SINCE 1999, BIOAG HAS GROWN TO BECOME AN AUSTRALIAN MARKET LEADER IN AGRICULTURAL FERMENTED TECHNOLOGY.

WE PROVIDE BIOLOGICALLY ACTIVE SOLID AND LIQUID NUTRIENTS FOR ALL FARMING SYSTEMS.

OUR PRODUCTS AND PROGRAMS DELIVER HEALTHY, LIVING, BALANCED SOILS AND SUSTAINED FARMING PRODUCTION.

BioAg treated pastures
South west slopes, NSW

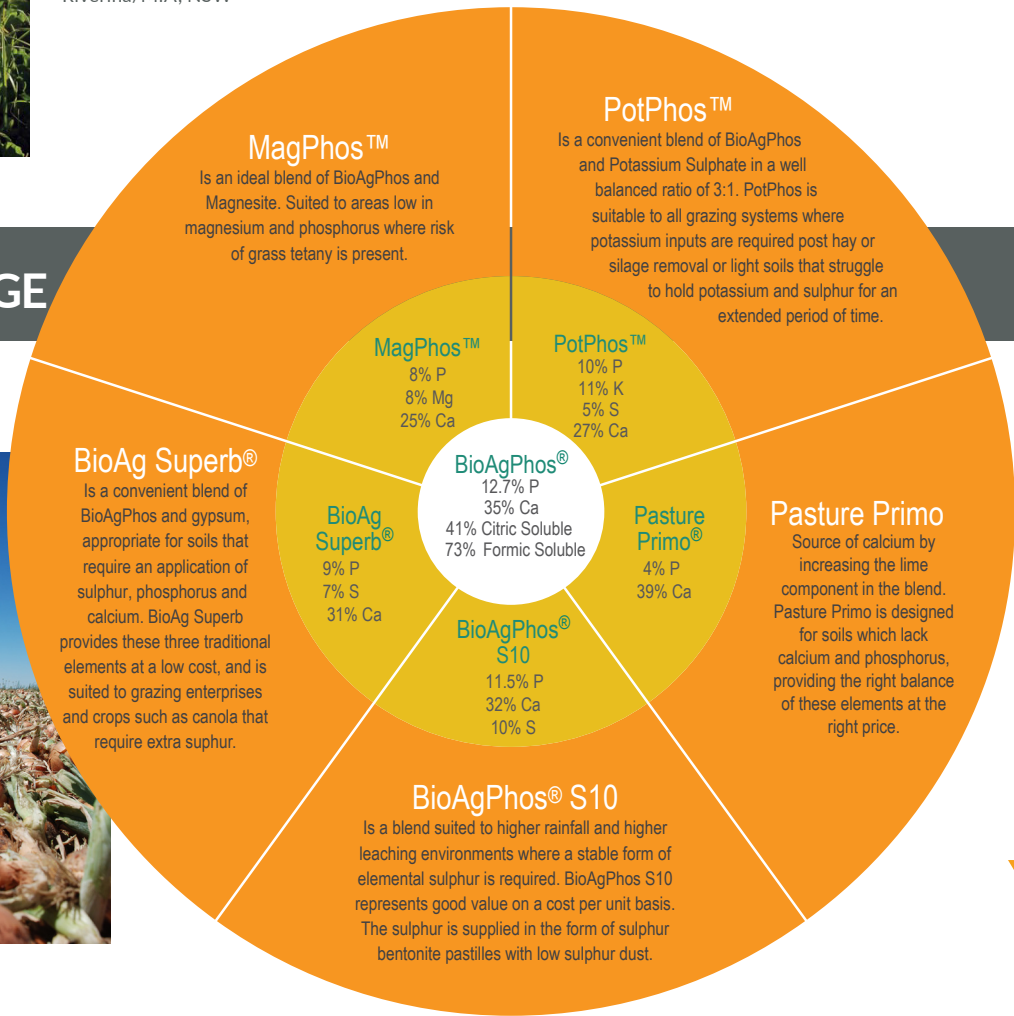

BioAg treated cotton crops
Riverina/MIA, NSW

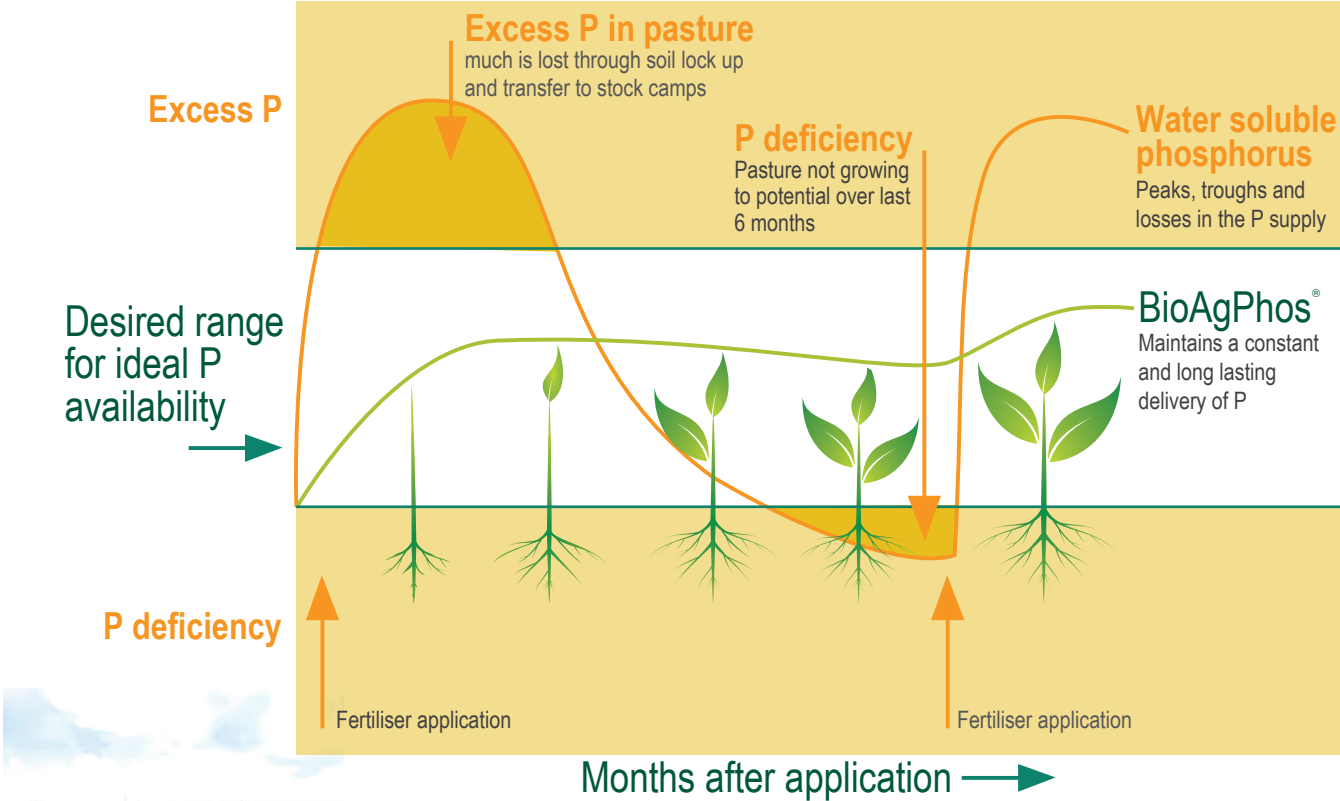

BioAg treated onion crops
South Australia

PRODUCT RANGE

PHOSPHORUS AVAILABILITY

Water soluble phosphates vs. BioAgPhos

BioAg treated dairy pastures
Victoria

WHEN TO SPREAD

Timing fertiliser spreading with crop or pasture needs, weather, and contractors has always been a challenge. Due to varying the mode of action when in soil, BioAg fertilisers can be spread at any time, so they are ready to produce when the rain comes!

PROGRAMS

BioAgPhos is ideal in grazing, cropping, horticulture and tree crops where an agronomically sound and cost effective source of phosphate is needed. BioAgPhos provides capital P in crop-ping programs, and complete P supply in grazing programs, and permanent plantings like trees and vines.

BIOAGPHOS

ADVANTAGES

STABLE FORM OF P
SUSTAINED RELEASE
YEAR ROUND PLANT AVAILABILITY
LOW CONTAMINANTS
ADD PLANT AVAILABLE CALCIUM
YEAR ROUND SPREADING

BioAg's solid fertiliser range is based on BioAgPhos, a high grade and highly reactive phosphate rock combined with BioAg's microbial digesting agent. The result a fertiliser range that is less reliant on rainfall to be plant available. By replacing water solubility with microbial digestion, we have reduced the amount of nutrient in soil lock-up, and provided a fertiliser range that can be spread at any time of the year. Around one third of the phosphorus and calcium is immediately available, while the remainder is slowly digested and released, allowing for annual or every second year fertiliser application. Independent analysis proves that 100% of our phosphorus is bioavailable*.

- » Reduced reliance on water soluble forms of phosphate fertiliser
- » Reduced fertiliser wastage
- » Improved crop and pasture growth from year round phosphorus availability
- » Simplify your spreading by blending with additional soil nutrient requirements e.g. lime, gypsum etc.
- » Develop a stronger and healthier plant and root system
- » Increased surface are, allowing for a more consistent release of P into the soil
- » Safe to spread on all areas of farm.
- » Spread near waterways and fight erosion

*Phosphorus bioavailability tested independently by the Australian Government's reference laboratory, the National Measurement Institute (NMI).
