

BioAgSOP™

ORGANICALLY CERTIFIED K & S FERTILISER

Better soils. Better crops. Better stock.™

Deliver potassium and sulphur in a certified organic form

BioAgSOP is an organically certified granular form of concentrated potassium and sulphur that is immediately available to the plant.

BioAgSOP is perfect for chloride sensitive crops such as fruits, vegetables, and grapes.

Ideal for crops with a high sulphur demand.

The high sulphur content improves nitrogen use efficiency and positively effects yield and fruit quality.

Potassium plays a vital role in:

- » Photosynthesis.
- » Starch accumulation.
- » Protein synthesis.
- » Controlling ionic balance within the plant.
- » Metabolism of carbohydrates.
- » Disease suppression.
- » Improving the plants ability to withstand both drought and frost tolerance.

Directions for use

Suited to mechanised spreading and bulk blending.

Suitable for the basal as well as the top dressing of crops.

Keep dry and covered with plastic tarpaulin to protect from moisture.

The optimal fertiliser rate depends on the soil potassium content, the cultivation intensity and the yield expectations.

22-26 Twynam St Narrandera NSW

- » Perfect for all crops and pastures that require potassium in a certified organic form
- » Granular form suited to spreaders and blending

Contains

Sulphate of Potash 50 (+45).

41.5% potassium

18% sulphur

Mined from a natural deposit in Europe

Permitted for use in organic farming
(Allowed Input 221AI).
