

ABOUT HYDRAHUME

HydraHume provides a single simple and organic solution for feeding the soil, building soil humus and increasing soil fertility.

By directly contributing to humus development, HydraHume increases the soil's water and nutrient holding capacity.

It is an efficient promoter of plant growth and increased root mass.

HydraHume rapidly accelerates the microbial activity in soils, developing soil carbon and reducing nutrient lock up.

In HydraHume, BioAg continues to utilise only high-grade raw materials to develop its product range.

By choosing leonardite as the principal raw material, we deliver one of the richest sources of humic acid available.

- » Build soil humus and carbon
- » Increase soil microbial activity and soil fertility
- » Retain nutrients and moisture
- » Promotes plant growth and root mass

Better soils. Better crops. Better stock.™

HydraHume®
Natural soil nutrition

Feed the soil
Promote plant growth and root mass

Australian made
Australian owned and operated

CAUTION

Keep out of reach of children. If swallowed, seek medical advice. Avoid contact with eyes and skin.

DIRECTIONS FOR USE

Apply directly to the soil, or by fertigation or pivot.

Direct application 5-20 l/ha

Fertigation/Pivot 10-20 l/ha

Preparation: Shake well before use. Jar test for compatibility prior to mixing with other products. Avoid mixing with low pH products. Apply within 12 hours of mixing.

Storage: Store out of direct sunlight. Do not store mixed product.

CONTAINS

Active ingredients 12% humic acid (derived from leonardite)

Inert ingredients 88% inert ingredients
