

# HydraFish™

NATURAL AND ORGANIC  
FISH DERIVED NUTRIENTS

Better soils. Better crops. Better stock.™

## Soil or foliar applied organic nutrient source

HydraFish is an excellent and natural source of vital nutrients including nitrogen, phosphorus, potassium, calcium, and trace elements.

It can replace products like UAN as a source of nitrogen suitable for use in organic farming systems.

HydraFish feeds soil-borne microorganisms, promoting plant growth.

HydraFish delivers nutrients without the risk of burning.

HydraFish is naturally high in protein, which is converted to nitrogen in well functioning soils.

HydraFish is 100% organic, and being a fine liquid, blockages in spray equipment are limited.

HydraFish is manufactured at a low temperature using a natural enzyme process to ensure that nutrients and trace elements are retained.

## Contains

Liquid Fish Meal 100%.

## Typical Analysis

Nitrogen 2.5%

Phosphorus 1.25%

Potassium 0.25%

Calcium 0.5%

PH 3.2-3.5

Fat & Oil 3.0% (approx.)

Salt (NaCl) <36%

» Excellent nutrient source for organic farming systems (replaces products like UAN)

» Fine liquid reduces blockages

## Directions for use

Agitate well before use.

Apply to soil or foliage. For best results, apply early morning or late afternoon.

Dilution 5% (e.g. 20 parts water, 1 part HydraFish).

Boom Spraying: 60-80 mesh screen on main filter. 50L/Ha jet size preferred to help limit blockages.

Add to near full spray tank slowly while agitating. Avoid straight product reaching filter systems.

Dissolve HydraFish separately and add last when used with other products.

DO NOT feed to sheep, cattle, or other ruminants.
